I have co-created state-of-the-art systems for Machine Learning, Computer Graphics, Computer Vision, and Computational Physics, exploiting hardware via DSL and using contemporary areas of Applied Math and CS. My current focus is Federated Learning, the branch of ML co-invented by my advisor in 2016<sup>1</sup> which will be the next big step of Machine Learning. I defended the status of a Ph.D. candidacy on 24 October 2022. My dissertation title is "Optimization Methods and Software for Federated Learning".
